11. Participant List – Coquitlam River Watershed Roundtable Meeting, November 5, 2011	14

1. Welcome, review of agenda, introductions

Facilitator, Julie Gardner

Gardner welcomed participants and reviewed agenda and meeting objectives, which included providing an update on Core Committee activities, gathering ideas on projects to include in the Roundtable work plan and providing opportunities for participants to inform each other about watershed news and activities.

Gardner recognized and thanked the organizations which provided displays for the Roundtable meeting, including: the City of Coquitlam; Coquitlam River Watch; Burke Mountain Naturalists; Tri-City Green Council and Watershed Watch Salmon Society.

She also acknowledged the elected officials present and candidates running for municipal office. These included:

- City of Coquitlam: Mayor Richard Stewart, and Councillors Linda Reimer, Selina Robinson and Neal Nicholson
- City of Port Coquitlam: Councillor Sherry Carroll
- Kwikwetlem First Nation: Councillor Fred Hulbert
- Village of Anmore: Elaine Willis, running for Council

2. Opening remarks

Councillor Fred Hulbert, Kwikwetlem First Nation

There is important work going on in the watershed, including efforts to protect drinking water quality and planting to restore streamside habitat. Humans have to look after our natural environment. I am very proud, as a member of the Council and the Kwikwetlem Nation, to know that we're taking action to enhance the river. We are bringing back its vibrancy, making sure the water is clean and the land around it is pristine. Enhancement and regeneration are important so that we can look with pride at the jewel in the valley that is our watershed.

3. The Virtual Environmental Watershed Centre

Allen Jensen, Core Committee member

Jensen noted that the creation of the Virtual Environmental Watershed Centre, a new, interactive Web site with a virtual tour, is the first initiative of the Roundtable. He introduced the members of the Core Committee Task Group who have been working on this initiative and representatives of New Earth

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

Marketing, the company hired to develop the new Web site. The members of the Task Group are Allen Jensen, Norm Fletcher, Elaine Willis, Margaret Birch, Craig Orr, George Turi, Maurice Coulter-Boisvert, and Sherry Carroll.

Susan Jarema and Anthony de Demko, New Earth Marketing

Everyone involved in the project has been passionate about this very special watershed. A brief video presentation highlighted the values of the watershed, the many projects underway and the passion that drives them.

The proposed Virtual Centre will help to document and recognize all the work going on. This new Web site will use interactive tools like Google Earth, a watershed map offering clickable “Quick Snapshot” sites to quickly access site-specific information, virtual tours and links to a wealth of multi-media information, including information and links to the various groups and the work they’re doing in the watershed. Interactive applications or widgets will be built in to help involve and engage people and organizations and to provide quick shortcuts to more detailed information. Search options will facilitate access to information in multiple media formats. Social media links will help visitors share information with a wider audience.

This is designed to be a site that shares the complexity, beauty and importance of the watershed visually, that attracts visitors and community use, that is simple and fun to use, and that allows easy “back end” access to allow multiple users to add, moderate and edit information. It is designed to be expandable, to provide multiple ways to explore and access information, and to offer wide compatibility, including compatibility with smartphones and social media.

4. Discussion: Putting the Centre to Work

Following the New Earth Marketing presentation, Julie Gardner noted that given the limited resources available, the Core Committee decided to focus on this one key project, which reflected priorities identified at the last Roundtable meeting. She introduced the discussion questions.

Discussion: How might an organization or project that you are involved in benefit from the virtual centre? How can we make the most out of the potential of the centre?

- Q: Where will this be hosted and what technologies is it based on? These choices may raise issues for future maintenance.
 - New Earth: The site uses CMS (content management system) and a Google open source platform, which is good for organizing data and involving multiple users. There has been no decision about the host. The software platform is based on Linux.
 - Jensen: The host for the current site is undergoing redevelopment, so that question is still under consideration.
- Q: Not using Flash is good for Mac users. How will you link media content without that?
 - New Earth: The site will use alternate options.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

- Q: After the site has been launched, how do we access and maintain it?
 - New Earth: We will train people to take it over. It will need a manager. Uploading content is simple and can be done by volunteers, although more complex changes would require a Web manager. We hope we could provide the ongoing management, but these are common platforms that others can use. It's your choice to decide how much you want this to grow.
- Comment: There is a huge population that is not familiar with this technology and the jargon we're using, so you really have to approach this with the masses in mind.
- Comment: It's good to see so many people here who originally did not speak with each other. A key feature of this project should be easy lesson plans and modules for teachers to use in schools. Children will be key to greater awareness and understanding.
- Comment: The Virtual Centre is a great idea. A key feature will be to show how I can get involved.
 - New Earth: There is a "Get involved" button. A children's resource centre will be an important feature as well.
- Q: I'm interested in the neighbourhood specific approach. Also what is the budget for this?
 - Margaret Birch: We're taking a phased approach. \$10,000 has been committed for the first stage, with \$8,000 spent so far. The Core Committee is taking a cautious approach.
 - New Earth: The design also facilitates a phased approach. You can have a basic site up and running that is very functional and then add to it later.
- Comment: Engaging each other is key. More and more, children spend time on computers in schools, so it's good to see an interactive aspect designed to engage children. It's important to have questions and answers and a design with advice from teachers to facilitate integration with the curriculum, links to field trips, etc.
- Gardner: Participants are invited to offer further advice through the Comment Form.
- Jensen: We had several artists at the last meeting, who stressed links between environment, technology and the arts. An example is the use of QR codes, which work with Smartphones to provide direct links to Web sites.
- Jensen: Invited participants to enter a contest to win a Coquitlam River Watershed Roundtable thermal mug by correctly taking a photo of a QR code and showing how the code led to a Web page about the Roundtable. There were nine winners.

5. Report on other Core Committee work for the Roundtable

Julie Gardner, Facilitator

This Roundtable's structure is unique. Everyone who supports the vision and values is welcomed as a member of the Roundtable. The Roundtable consists of whoever turns up and takes an interest. The Core Committee provides continuity and keeps driving the work forward by finding funding, organizing meetings and advancing projects.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

Introduction

Gordon Lewis, Core Committee (Stewardship Sector)

We are the community and we have a passion for the river. The river is happy because people have fought for it. I am honoured to work with the Core Committee, and I look forward to the future. “Watershed Wake-up” is an appropriate theme for this meeting. The watershed is finally getting the respect it deserves. The Roundtable is the manifestation of the community, and we need to get this out so that the community can understand our connection.

Current Core Committee members

Maurice Coulter-Boisvert, Fisheries and Oceans Canada, Core Committee (Federal Government Sector)

The Core Committee is a group of individuals that agree to respect the respective jurisdictions in the watershed and to provide a vehicle for coordinating activities. The intent is to try to hire a fulltime coordinator in the future, if possible. The Core Committee represents local and regional governments, utilities, federal and provincial governments, the aggregate and real estate industries, First Nations, outdoor recreation, stewardship and education interests. The establishment of the Core Committee to serve as the administrative body for the Roundtable was one of the key recommendations flowing from the extensive consultation process that led to the creation of the Roundtable.

Twelve out of twenty members and alternates on the Core Committee were introduced and thanked for their work. For a complete list of Core Committee members and alternates, visit:

www.coquitlamriverwatershed.ca. Gardner noted that the Core Committee is working on filling a seat for the Education Sector and finding an alternate member for the Outdoor Recreation Sector.

Coquitlam River Watershed Roundtable Mission Statement

George Turi, Jack Cewe Ltd., Core Committee (Aggregate Industry Sector)

Our industry gets it! We got it many years ago, and we have been making many changes to help support the watershed. The river today in its urbanized form has no one single stress – it has many stresses that have not been thoroughly identified and quantified. We tried before to form a group like this in the 1990s and many of the people who tried then are here today. It’s very good and very important that this has taken hold. The Coquitlam River is a beauty, and it deserves to be taken care of. Efforts in the 1990s raised awareness and restoration work began. Today, the Coquitlam River has qualities and productivity that are comparable to non-urban rivers. We need to thank everyone who worked hard to get here. Our job now is to make it better and to keep going. The reality is more homes and roads will be built, so we need a body that takes care of the whole watershed. Many are working to take care of the small parts, but we also need to focus on the whole. We need to make the river what it can be in the future.

This Roundtable resulted from efforts that began anew in 2007, with many workshops and lots of very good information compiled. Work included the development of a common vision and values for the watershed and guiding principles. And this mission statement tries to bring it all together so that it is brief, understandable and clear.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

Turi introduced the Mission Statement:

The Coquitlam River Watershed Roundtable will:

- Facilitate collaborative resolution of urban growth and natural resource use pressures consistent with agreed community objectives and values,
- Inform and educate people about these matters and the watershed, and
- Promote and support conservation of a sustainable, healthy watershed environment.

It's about collaboration and common interests. And this is forever. As the community grows, we need attention to all areas of the watershed.

George acknowledged Norm Fletcher, PoCo and District Hunting and Fishing Club, Core Committee (Fishing and Hunting Sector) who participated in the Task Group on the Mission Statement with him.

Administration and funding

Margaret Birch, City of Coquitlam, alternate, Core Committee (Local Government Sector)

This initiative is now in its fifth year, with a cash budget of \$75,000 provided by the Fraser Salmon and Watersheds Program and Fisheries and Oceans Canada for the fiscal year ending March 31, 2012. This budget provides funding for two meetings of the Roundtable (a second one will be held in the new year), and three or four Core Committee meetings. Other activities covered by this budget include sharing information in various forms, defining and initiating three new projects, and preparing a business plan. The Roundtable also relies heavily on the considerable in-kind contribution of time by Core Committee members and support from Core Committee members' organizations.

Some adjustments had to be made for this year, since there were only two significant cash sources. We felt we could not move forward on projects with just three Core Committee meetings a year, so we had to meet monthly (we scaled down meeting costs). The Core Committee also chose to divide up the work by forming Task Groups for specific tasks. The Core Committee decided not to hire a new coordinator and elected, instead, to continue to rely on the consultants who provided coordination and facilitation services in previous phases of the Coquitlam River Watershed Strategy. We need to demonstrate project successes to get funders to step up with more support. We hope to hire a coordinator next year, perhaps on a part-time basis, if there is more funding. The Core Committee will also scope out a role for the coordinator as we begin to better understand what needs to be done.

Funding is key, so we dedicated some time to seeking secure funding and made two funding applications. We also welcome participants' funding ideas. Our current cash support ends on March 31, 2012.

An important project that the Core Committee has just started is the development of an evaluation framework. This is a very significant piece as we need to be able to define measures to evaluate the Roundtable's performance and success. We welcome people to participate in the development of the

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

evaluation framework. Important questions include: what are the factors for defining success, what are desired results, and are we following the guidelines that were set out?

Margaret acknowledged Councillor Selina Robinson, Core Committee (Local Government Sector) and Maurice Coulter-Boisvert, Fisheries and Oceans Canada, Core Committee (Federal Government Sector) who served on the Task Group on Funding with her.

Operational Guidelines

Dave Dunkley, Metro Vancouver, Water Management, Core Committee (Regional Government Sector)

As a planner, I deal mainly with the upper watershed and the interface between the upper and lower watersheds. How many people know there is a glacier up there and that we're drinking glacier water?

As one of its first steps, the Core Committee established a Task Group to develop Operational Guidelines for the Roundtable and Core Committee. The Operational Guidelines are posted on the Roundtable Web site: www.coquitlamriverwatershed.ca. The guidelines are intended to give structure to decision making and a cohesive approach. For example, all of the Roundtable activities are guided by the common vision and values, principles and mission statement for the Roundtable. The Operational Guidelines state that these can be changed, but changes must be approved by a minimum of 80% of Roundtable participants.

The Core Committee terms of reference state that members serve 18 month terms and commit to participating in six Core Committee meetings a year. The role of the Core Committee is to help by bringing ideas and questions to the Roundtable. We also report back through meeting notes and other information posted on the Web site. Julie Gardner has facilitated the Core Committee meetings to date, but the plan going forward is to have rotating co-chairs drawn from the Core Committee. We try to make decisions by consensus or by a vote of at least 80% if consensus is not possible. Any Roundtable participant can attend a Core Committee meeting as an observer. Observers can also bring issues forward through a committee member. There may occasionally be closed meetings if there are legal or other issues that require it.

Dunkley noted that Julie Gardner provided excellent guidance in the development of the guidelines. He thanked Blaire Chisholm, chair, and other members of the Operational Guidelines Task Group, including Steffanie Warriner, City of Coquitlam, and Councillor Sherry Carroll, City of Port Coquitlam., both of whom represent the Local Government Sector on the Core Committee.

6. Keynote presentation

Elaine Willis, Tri-City Green Council, Core Committee (Stewardship Sector)

Willis introduced Dr. Rob Butler, a senior research scientist with the Canadian Wildlife Service and current president of the Pacific Wildlife Foundation.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

Rob Butler, Pacific WildLife Foundation

It is a pleasure to hear all the excitement around this organization and to see old friends again.

Do you feel that the world will be worse off for your children than it is today? About 50 – 60% of the audience responded, “Yes.” If you ask young people, around 80% feel that way. Why are we so pessimistic?

When we look around, there are so many great things happening. Many birds of prey around the world that were once lost to DDT are now recovering. Whales are recovering, as are sea otters and other marine species. All kinds of things are improving around the world, such as falling child mortality. There are very real problems, but why do we dwell on those when so many good things are happening? Look at all the groups involved here. That wouldn’t have happened 20 years ago. You should be very proud of what you have here – with wild fish spawning in the river, right in the heart of this city.

Recently we have seen whales along the South Coast that are genetically distinct and that are starting to come back from near extinction. On a recent visit to Taiwan, I saw conservation projects such as the restoration of a badly-degraded river. Initial work prompted a surge in local resident involvement and pride, and more citizens joined in and extended the work much further. In Italy, we saw key decision-makers overcome their scepticism over a proposal to set aside a protected sanctuary. They acted and the birds indeed came back.

Nature is resilient if we give it a chance. It’s not just about other species. There is now research showing that if there are green spaces where you live, people are healthier, healthcare costs are lower, and all of society benefits. When children are given the opportunity to play freely in nature, it benefits their development.

I urge you to consider the “century test”. Europeans have lived here for 150 years. We’ve spent a lot of energy building bridges and other structures that will not last. Restoring this river is a legacy that will be passed on to future generations – it is something that will pass that “century test”.

Rob Butler’s presentation is available on You Tube: <http://youtu.be/SKKjGdNgWoe>

7. Roundtable projects or activities for the coming year: How we move ahead

Julie Gardner, Facilitator

During the afternoon discussion sessions, we want to build on the progress that has been achieved before. This is a description, drawn from previous meetings, of how the Roundtable and Core Committee work together:

- At meetings the Roundtable sets priorities and Roundtable participants consider joining project teams.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

- Core Committee takes the ideas and draws up workplan and budget. (Recall the budget up-date that Margaret provided.) There is no guarantee that the Roundtable can deliver any particular project.
- Roundtable project teams form to carry out each project, with at least one Core Committee member.
- Core Committee meets to monitor projects, do administration, and supervise coordination.

Project teams involving Roundtable participants were not formed after the last Roundtable meeting, so we want to try harder to do this in the next phase, while being realistic about what can be accomplished, given the lack of a coordinator. The hope is that this approach will build momentum and attract resources so that more can be done in future years.

Suitable projects are those that help to pursue the vision and are consistent with the values and mission. They should have broad relevance to the watershed, complement existing projects and fill gaps (not duplicate existing activities). They should be readily achievable and help to build an early record of success in order to attract more interest and funding. Such projects should also seek to build awareness and involvement and provide educational opportunities.

Project categories, based on past advice, include: planning; public awareness, education and art; a CRW resource centre (i.e. the Virtual Centre Web site); stewardship; and monitoring. There may also be other appropriate projects that have not yet been suggested.

8. Breakout discussions: Potential Roundtable projects

Participants organized themselves into groups based on the above project categories and were given notes and suggestions from past Roundtable meetings relating to their topic. Gardner invited the groups to spell out what the proposed project would look like (steps involved, outcomes); resources required and possible funding sources; and whether and how Roundtable participants could get involved as volunteers to carry out the proposed project. She stressed that the Core Committee's role is to provide coordination and administration, rather than to undertake projects on its own.

Gardner noted that the Comment Form provides an opportunity for participants to provide their contact information if they are interested in volunteering to help with Roundtable projects and activities. After breakout discussions, the groups reported back as follows.

Monitoring

Project ideas include:

- Look at what data we already have and where it is and how to amalgamate it (e.g. BC Hydro data). It makes sense to bring it all together so that we know what we're starting from.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

- There is supposed to be a monitoring plan for the Gateway highway projects. This group should tap into that to monitor the effectiveness of mitigation efforts such as culvert replacements.
- Wilson farm project. Overall monitoring plan and specific parts.
- There used to be individuals looking at gravel mining discharge, but we need resources to do this consistently and with an organized group. We did collaborate on doing this. There are sites where photo documentation was already done on a regular basis. This could be pursued again as a Roundtable project.

Additional Flipchart notes – Monitoring

- *Benthic*
- *Monitoring to 2019 – 11 parameters*
- *Riverwatch Newsletter*
- *Flow rate, N2O level, photo-monitoring*
- *Attend BC Hydro's WNP monitoring committee (2 x year)*

Stewardship

The key proposal was for a youth-led stream clean-up, as proposed by John Lewis (Salmon Sensitivity group). This would engage youth 19 and under, primarily through high schools. We would need resources to help coordinate this, e.g. having Public Works pick up bags of garbage, providing a safety orientation, etc. Riverside Fly and Tackle has been doing an annual clean-up. We could coordinate with them and build on that. Perhaps schools could take on responsibility for one-kilometre stretches of the river. BCIT, Douglas College and the School District 43 could provide assistance and capacity to support this project. Municipalities could provide maps and customer service lines to help coordinate planning and execution. The idea is to encourage youth to be leaders and to use the Roundtable members to support them. Costs are minimal because they are mostly in-kind and the frequency and scale of the project can be scaled up or down as desired.

- Gordon Lewis asked if it would be possible to put up signs along the river to educate people and discourage people from throwing their garbage into the river. He also proposed using his vehicle to advertise watershed initiatives.

A CRW Resource Centre

Suggestions included:

- Do presentations at high schools to get students actively involved and perhaps competing against each other on environmental initiatives.
- Create interactive game elements targeting different groups (elementary, high school, college, adults, seniors). Have sections of the Web site that appeal to these distinct audiences. Game ideas: Help the salmon up the river, or invite visitors to share personal messages on what the Coquitlam River watershed means to them.
- Publish a Web magazine or newsletter 2 – 4 times a year to keep viewers coming back. Provide regular updates on watershed activities and events.

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

- Create a Web site calendar with links and information about upcoming events like bus tours, hiking tours, etc.
- “Seeing is believing”: Organize a GPS scavenger hunt to tag cultural and historical landmarks.
- Sponsor a scholarship contest for people entering college.
- Provide opportunities for groups to adopt sections of the river and provide spaces where people doing that can put their stories and pictures online.
- Share information about other watersheds – things that are complementary to this watershed initiative.

Public education, awareness and art

Suggestions and discussion points included:

- Plan a day-long event about the river and the watershed. Plan it as part of the build-up to Rivers Day or have it on another day. Plan a multi-station festival at multiple points on the river. Include a tour and focus on children who will bring their families to the event.
- Organize a marathon that starts at the dam and goes to the mouth of the river, thus creating a connection to the river.
- Connect with the events planned by First Nations. Their goal is to have enough water to have four canoes abreast going upriver.
- Highlights: a festival of some kind and also periodic monthly tours. Maybe combine this with RiverWatch.

The group discussed the idea of the river having a million voices. These include spoken voices, the thoughts and dreams of youth, the silence in the winter, the birds, even the dying fish, the trees and the wind. These are all voices – listen closely, watch everything and see how every season is dependent on that place. Look and listen to what Mother Nature provides and how the weather treats the land. The voice of the river speaks in every form, and we have to learn how to listen to that voice. It speaks to all of us. We have to learn to understand what its saying. If it’s in trouble, we need to get together and figure out how to heal it. It is as alive as it’s always been.

Planning

Proposals and discussion points included:

- Review the information gathered about the watershed to strategically guide planning for the next five-years. (What’s been done, what needs to be done, how should it be done, where should it be done, when should it be done, who should do it, etc.)
- Integrate upper and lower watershed data to provide a full watershed perspective. There is a lot of public information on the land base so it’s a matter of making it available and integrating information from above and below the dam.
- Environmental services – Coquitlam Watershed. Services provided by nature are very valuable to humans (i.e. food, filtration capabilities provided by forests, carbon sequestration, reduced flooding

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

benefits, biodiversity habitat, recreation, plus many more). A natural capital project (taking stock of the environmental and resource assets within a region and assigning a value to them through market and non-market techniques) has been under discussion for the upper watershed, with the hope of embarking on it in 2012. It would be very valuable to have this for the lower watershed, as well, to support planning and to help political decision makers understand that the true value of the watershed is more than just the value of the land – it includes the value of all the goods and services provided by ecosystems and their functions - everything from fish and biodiversity to intrinsic cultural values.

Note: The David Suzuki Foundation recently estimated the value of ecological services in the Metro Vancouver region. Perhaps educational institutions such as BCIT, Douglas College and others could assist with doing this for the Coquitlam River watershed. We could use the information for strategic planning.

- A dedicated funding source is very important to make the process work.
- Fish passage past the dam (sockeye primarily) is being worked on. Peer pressure from the Roundtable will help keep that alive and moving.
- Integrated storm water management plans (ISMPs): all municipalities within Metro Vancouver are currently in the process of undertaking ISMPs, including Coquitlam and Port Coquitlam. There may be a role for the Core Committee or the Roundtable to help with the review of these plans.
- Look at how the Evergreen line would affect storm water, fish habitat and whether the Roundtable can help address such issues. “Be a watchdog to ensure that the work protects critical habitat.”
- Work with municipalities on including watershed issues in official community plans.

Discussion

Gardner noted some of these may be longer-term vs. immediate projects and again urged participants to provide their contact information so that they can get involved to advance these proposals.

9. Sharing watershed stories

Participants were invited to break into small discussion groups for a few minutes to identify potential issues not already addressed in the agenda. Participants reported back as follows:

- The city is reviewing a development application for a 13.5-acre parcel straddling the river near New Horizon. There is concern that the proposal includes 14 new houses to be built in a section designated as park and open space along the river, so we invite people to sign a petition to preserve the open space.
- There was extensive silt contamination in Orr Creek. This was natural because there was a diversion due to a slide and log jam. DFO and GVRD fixed the slide and removed the log jam. The

Coquitlam River Watershed Roundtable

November 5, 2011 • Victoria Drive Hall, Coquitlam • Summary Notes

next year, a huge flow washed out gravel and cobble to a section of the main river that had been starved of good gravel habitat due to the dam. This is one of the good news stories. Now the gravel and cobble has spread all the way down to Colony Farm.

- We have seen many changes since 1979, including new buildings, a bridge connecting Wilson and Colony farms, trails, gardens, enhancement and berm removal. New things are going on, with reclamation at the gravel mines, the hatchery was rebuilt, Orr Creek improvements, channels below the dam and the new dam. These are all new, plus the new bridge and the TransCanada Trail.
- Unresolved issues include gravel mine discharge (not Cewe), the need for new leadership for sockeye renewal efforts, finding sustained funding to hire a coordinator to keep these efforts alive, and concern about invasive plant species in the lower watershed.
- The City of Coquitlam has existing programs to help community groups facilitate a weed pull. The city can bring a truck and work together with volunteers.
- I live in River Springs and when it rains, the clear river becomes opaque. I'm really happy we are at the table with gravel mine operators and hope their efforts are sincere and that we are truly on the same page working together.
- I've seen the mines and work being done by Cewe – phenomenal work is being done.
- It's been a long road, and we've travelled a long distance, and I'm here to represent Cewe. A lot of transformation has happened in that company. We are very proud of what we have accomplished, though there is still a ways to go, with improvements happening in phases. The new owners have asked me to be involved with this group: they care and they want to work with the community. Work to date includes replanting slopes and clarifying discharge.
- I agree that there has been success with Cewe, and we are also making headway with other operators.

10. Closing remarks

Julie Gardner thanked everyone, noting that the Core Committee will work on ways to follow up with participants who have expressed an interest in volunteering. Margaret Birch also thanked participants, saying this had been the most enlightening and empowering meeting to date in the five-year process to establish the Watershed Roundtable.

Coquitlam River Watershed Roundtable
